Critical Infrastructure And Scada Systems
Current Scenario Industrial control systems (ICS) and Supervisory Control And Data Acquisition (SCADA) systems are critical components for the operation of industrial facilities and critical infrastructure. Successful cyberattacks could paralyze internal processes, cause financial losses and potentially lead to the loss of human lives.

SCADA & security of critical infrastructures [updated 2020]
SCADA networks are used in critical infrastructure to control the smart grid, oil pipelines, water treatment and chemical manufacturing plants. And the threat of hackers taking them over or a worm causing an outage quickly escalate into "Hollywood" or "worst-case" scenario. This paper will discuss a variety of SCADA security issues, including an analysis of how active vulnerability scans can disrupt older networks and how Tenable’s solutions, including passive network monitoring, can help ...

SCADA is a backbone of the oil and gas industry’s critical infrastructure. The Internet Age has enhanced and expanded the functionality of SCADA systems, but it has also exposed them to new and unique risks. In the event of a cyberattack, it may not be possible to react quickly enough to stop the attack, and the resulting damage can be immense.
